

PROJECT SHOWCASE

PROJECT
G8 Summit @
University of
Waterloo Centre
for the
Environment

LOCATION
Huntsville, ON

WALL DETAILS
Curved Wall
35' x 22'

For the 36th G8 Summit (2010), this UW venue was renamed the Waterloo Summit Centre for the Environment – currently a research, teaching and community centre. The Nedlaw Living Wall Biofilter designed and installed for the Summit is now a permanent centerpiece.

In addition to removing harmful VOCs, this living wall biofilter has added real value as an educational tool and a demonstration of environmental initiatives.
